

The Ontological Event Log

*The ologan:
The order you see things
changes the autopsy.*

There is no hidden state.
Everything is an append-
only event history. States
are simply derived views
over this log.

Time is Not a Universal Coordinate

ZOOM OUT: Fast Time

ZOOM IN: Slow Time

Two players at different zoom levels do not inhabit the same effective present. Time Crystals reconcile local history with global history.

The Spherepop Traversal

Stealth, diplomacy, and computation are all the exact same mechanic: evaluation-order.

CARELESS TRAVERSAL

Outer scope evaluates first -> Destroys inner access -> Inhabitants alerted

CAREFUL TRAVERSAL

Innermost-first evaluation -> Preserves structure -> Passes unnoticed

The Multiplayer Inversion

TRADITIONAL MMO

- Shared Space
- Private History
- Location is Private
(Conflict = Scouting)

HAPLOPRAXIS

- Private Space
- Shared History
- Location is Broadcast
(Conflict = Interpretation)

Players are separated by enormous geographical distances but united chronologically. The network of permanent flares acts as a distributed, visible memory system for future traversals.

Escaping the Simulation

The Resource:

The Resource:
Texture Crystals
temporarily add surface to
outline-only objects.

The Anchor:

The 11-Hour Watch is not
merchandise; it is the first
game coordinate system
escaping into the real world.

The Math:

2 revolutions per day =
22 game hours per real day.
1 game hour = 1.09 real hours.
A permanent, drift-free
synchronization baseline.

The URFN Constitution

Universal Resource and Fabrication Network

Digital Abundance:
Zero marginal
user cost.

PRINCIPLE: Information should become easier to preserve, organize, and access as collective participation increases. Physical objects are sold to fund the digital commons.

Physical Scarcity:
Requires matter,
energy, and labor.

The Three Resource Classes

1

Digital Information

Abundant
Free to user.

2

Mesh Resources

Verifiable
System-compensated.

3

Physical Realization

Scarce
Purchased by user.

INVARIANT: Uploading volume is never rewarded. Compensation attaches ONLY to verified provision of infrastructure and services.

The Orthogonal State Vector

$$\mathbf{O} = (A, P, V, D, T, C, G)$$

These states are orthogonal, not sequential. A single decision does not automatically grant all permissions.

The Separation of Identity

Layers of Identity

THE INVARIANT:

The archive must be re-indexable without being re-identified.

Semantic location is a derived index, never canonical identity.

This decouples long-term archive integrity from short-term AI model upgrades.

The Semantic Capital Network

The Pipeline of Continuity

Physical goods are not an add-on. They are the terminal points of the pipeline—a continuity mechanism resistant to node churn, model obsolescence, and platform collapse.

A Dissipative Structure

OPERATOR ECOLOGY

Order is maintained through continuous throughput and maintenance, not static storage.

What survives is what keeps getting used.

THE SYNTHESIS

Haplopraxis is a massively distributed archaeology engine disguised as a space game.

URFN is the constitutional machinery funding its survival through physical continuity.
